## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Czeiler et al. (USPN 4,421,803) hereinafter “Czeiler” in view of Jansen et al. (USPN 5,766,336) hereinafter “Jansen”.

In regard to claim 8, the Czeiler reference discloses an incandescent lamp with a coating on the inner walls of the bulbs (Column 5, Lines 45-46). The pigment contains titanium dioxide, a white pigment, (Column 5, Lines 29-30) and cadmium yellow (Column 5, Line 59). The Czeiler reference discloses a pigment containing cadmium, but does not disclose an oxide-nitride pigment. The Jansen reference teaches that cadmium based pigments used to color various articles can be replaced with an oxide-nitride pigment. The cadmium-based pigments are known to release toxic constituents (Column 1, Lines 15-30). Jansen discloses general formulas for several oxide nitride pigments. The following constants are used for the formulas (Column 12, Lines 9-13 and Lines 27-30):

A = Mg, Ca, Sr, Ba

C = Mg, Ca, Mn, Fe, Co, Ni, Zn

A' = Ln, Bi, Al, Fe

C' = Al, Ga, In, Ti, V, Cr, Fe, Co, Ni

A'' = Ln, Bi

D = Al, Ga, In, Ti, V, Cr, Fe, Co, Ni

Art Unit: 2879

 $B = V, Nb, Ta$  $D' = Ti, Zr, Hf, Sn, Ge, Si, Nb, Ta$  $B' = Ti, Zr, Hf, Sn, Ge$ 

The following general equations were disclosed:

 $A_{1-u} A'_u BO_{2-u} N_{1+u}$  where u is between 0 and 1 (Column 11, Lines 45, 57-58) $A_x A'_{2-x} B_2 O_{5+x} N_{2-x}$  where x is between 0 and less than 2 (Column 12, Line 1, 13-15) $A'_2 B_{2-y} B'_y O_{5+y} N_{2-y}$  where y is between 0 and less than 2 (Column 12, Line 5, 13-15) $CD_{2-m} D'_m O_{4-m} N_m$  where m is between 0 and 2 (Column 11, Line 9, 21-22) $C_{1-n} C'_n D_2 O_{4-n} N_n$  where n between 0 and 1 (Column 12, Line 24, 34-35) $A'_2 CBO_5 N$  (Column 11, Line 34) $A'_2 A'' BO_4 N_2$  (Column 11, Line 36) $A'_2 DBO_3 N_3$  (Column 11, Line 38)

Thus, it would have been obvious at the time the invention was made to a person having ordinary skills in the art to use a non-cadmium based pigment based on the general formulas, as taught by Jansen, to coat the inside of incandescent lamps.

***Allowable Subject Matter***

1. Claims 1-7 are allowed.

Regarding claim 1, the references of the Prior Art of record fails to teach or suggest the combination of the limitations as set forth in claim 1, and specifically comprising the limitation that the electric lamp has a coating consisting of the inorganic colored pigments described by the formulas in the claims.

Regarding claims 2-7, claims 2-7 are allowable for the reasons given in claim 1 because of their dependency status from claim 1.

***Response to Arguments***

Arguments are not found persuasive.

Regarding applicants claim that Czeiler in view of Jansen does not disclose a white pigment in combination with a colored pigment, the Examiner respectfully disagrees. Czeiler discloses the use of titanium dioxide, a white pigment, in Column 5, Lines 29-30 mixed with a light yellow pigment, if looking at example 1, or with yellow and red lamps if looking at example 2 (Column 5, Lines 52-63).
